1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William D. Jackson on October 5, 2005, wherein it was pointed out that Figure 1 did not provide a drawing label 10 and the specification in Para [0019], page 10, incorrectly referred to a row of wells 24, rather than 34. Accordingly, it was agreed to delete the references to "curve 10" in pages 7 and 8 of the specification, and change "24" to "34" in page 10 as set forth below. It was further agreed that the examiner would provide the correct spelling of "carbonaceous" in claim 1.

The application has been amended as follows:

In the specification at page 7, line 6 of Para [0015], the recitation "curve 10" has been changed to read -- the curve -- .

In the specification at page 8, line 2, the recitation " a curve 10" has been changed to read -- the curve -- .

In the specification at page 10, line 8, "24" has been changed to -- 34 -- .

In claim 1, line 12, the term "carbonatious" has been changed to read -- carbonaceous -- .

2. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims is that none of the references cited, taken either singly or in combination, teach or disclose a method for the storage of hydrogen within a solid carbonaceous subterranean formation, as in the claimed combinations, including the representative steps (c) - (e) of claim 1. For example, the reference to Chaback et al (5,454,666)

Art Unit: 3676

discloses the injection of a gas into a solid carbonaceous subterranean formation, such as a coal bed or deposit, after the desorption and recovery of methane, however the gas is injected into the formation for permanent disposal therein, rather than for storage and subsequent use, and further such gas does not appear to include hydrogen. It is further noted reference to Magnie (4,183,405) discloses injection of hydrogen into a subterranean crude oil reservoir for the purpose of forming a gas cap in the reservoir upon exceeding the adsorption capacity of the crude oil for hydrogen, but does not disclose a step(s) of desorbing methane from a solid carbonaceous subterranean formation, as required by the pending claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Suchfield whose telephone number is 571-272-7036. The examiner can normally be reached on M-F (6:30 - 3:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Glessner can be reached on 571-272-6843. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
